

LiveGuest

ENRICH YOUR PROGRAM WITH A LIVE INTERVIEW

AVIWEST LiveGuest empowers professional broadcasters to create engaging, innovative content for audiences by inviting remote guests to join a live video call directly integrated with their production system. Integrating remote guest interviews has never been simpler!

Your guests can easily join a live from their laptop, smartphone or tablet. No software installation is required so anyone can join a live video without any prerequisites. They click on the link they have received by email and directly access the live. They will automatically connect to a StreamHub in your studio. Up to 16 Guests can simultaneously be connected to a StreamHub unit. The video streams received in the studio can be decoded and sent over SDI and NDI, letting you integrate the Guests within your live production system.

Guest interviews, remote sports commentary, virtual press conferences and public experts contributions... Interview anyone from anywhere with LiveGuest, our easy-to-use and professional solution powered by a powerful cloud infrastructure.

KEY FEATURES

PROFESSIONAL PRODUCTION WORKFLOWS

Thanks to the AVIWEST LiveGuest integrated solution, any Guest video and audio content received in the studio can be sent over SDI and NDI. SRT support also allows you to build full cloud-based production workflows, taking advantage of StreamHub Cloud deployment over any public or private cloud.

AUTOMATED ECHO CANCELLATION

The Guests can listen to the audio sent by the studio on their speakers, they don't need headphones. Automated Echo Cancellation capabilities ensure no feedback or audio echo during the guest interview.

VIDEO RETURN & INTERCOM

Accessible from any web browser and any device (laptop, smartphone, tablet), the LiveGuest solution supports bidirectional video return, allowing the guests to receive, watch, and hear the content being produced in the studio. Audio intercom let your guest receive the Mix-minus of the current program, as well as direct instruction from the production crew. All integrated within your professional production workflow!

SOCIAL MEDIA PLATFORMS

The interview can be sent directly from the StreamHub to all major Social Video Platforms. Indeed, our StreamHub can support multiple RTMP outputs and has integrated video and audio transcoding capabilities. It allows broadcasters to deliver their content to any social media platform such as YouTube, Twitch, Facebook etc.
